• P390

Highly Accurate Portable Infrared Non-Contact Pyrometer

P390 is specially designed portable IR Pyrometer for non-contact temperature measurement of metallic surfaces and in flame heated furnaces i.e through flames and flue gas. At a wavelength of 3.9µm, hot furnaces gases and clean burning gas flames are quite transparent and therefore permit temperature measurement of substances to be measured.

The multi functional bright back light additional LCD graphic display panel provides an indication of status and configuration of pyrometer together with measurement mode. The measuring result is shown and can be analyzed directly on site.

The bright through the lens sighting gives a precise definition of the target spot. The portable pyrometer provides fast, simple data logging with USB connectivity to download this data to PC for analysis.

The fast response time within milliseconds allow exact measurement of fast moving object. The large data storage (data store upto 4000 values) of measurement offers the best possibility for analyzing the data.

Software “Infrasoft”

AST Infrasoft software is under standard scope of supply. It offer possible connection with PC for parameter setting, offline graph and to evaluate measuring data. Communication between the pyrometer and the PC is implemented via a USB cable connected between the pyrometer and the PC USB port.

Some of the parameter adjustable via software are :

- Emissivity
- Clear Time(Peak Picker)
- Unit of Temperature (°C/°F)

Optics

The pyrometers are equipped with a high quality focusable optics. Adjusting the optics to required measuring distance achieves the spot sizes specified in table. The adjustment can be taken via the scale on the objective or by focusing the measuring object in the view finder. User can adjust measuring distance from 500mm - 9000 mm.

Measuring distances between 500 & 9000 mm with small spot sizes can be achieved with the pyrometers.
