

€ Furnace Monitoring Thermal Camera System

High Temperature Furnace monitoring thermal camera system **AST TE-750, TE-750/OV, TE-1100 & TE-1100/OV** provides wide angle view of burner flames, material alignment & other process conditions with temperature in furnace, kiln, boiler, cooler, reheating furnace or other combustion chamber. The **AST TE** Series is mounted on wall of the furnace.

The system has auto-retraction & auto insertion which is regulated by control cabinet with PLC & pneumatic control system.

It uses special Thermal camera with high precision pin hole lens which is mounted inside stainless steel probe. The probe is equipped with vortex air & water cooling system that enables the system to work in high temperature environment & also continuous supply of air keeps the lens clean.

The camera is inserted through a shutter which opens with the force of camera probe & shuts the furnace opening when the probe retracts.
